World Wealth Distribution: Income Equality Exercise

- **In your table groups**, score the world's countries in terms of <u>income equality</u> from **least equal (#158)** to **most equal (#1)**. Which are the top 5? The worst 5?
- **BEFORE you begin the task**, predict where Canada, the United States, Russia, Great Britain, China and Brazil will end up score wise. These are some of the world's largest countries.
- **Select one table member to report** some of the data back to the class when prompted.
- Once you watch the video that will follow this activity, **reflect on both your predictions and the facts** (note: video shares 2019 statistics, although little has changed in the first few months of 2020). What surprised you? Angered you?
